Dear Teacher:

This Heads Up installment highlights the unique one-on-one interview I had with a teen reporter on the timely issue of prescription-drug abuse. Although overall teen drug use continues to decline, levels of prescription-drug abuse remain unacceptably high among teens, according to NIDA’s latest Monitoring the Future survey. Your students may mistakenly believe that prescription drugs are safer to abuse than illegal ones because a doctor prescribes them. While prescription drugs are beneficial when used properly, teens need to know how powerfully addictive and dangerous these medications can be when abused. They also need to know where they can get reliable, science-based answers to their questions.

My discussion with teen reporter Marie French highlights the risk of addiction to prescription drugs and the negative effects addiction can have on a person’s health, family, and friends. The student worksheet contains additional helpful information to answer other questions teens might have regarding prescription medications. We hope you share this important article and lesson with your students and encourage them to use the facts they learn to make smart choices.

Nora D. Volkow, M.D.
Director,
National Institute on Drug Abuse

In This Installment:
• Student article: Q&A with Dr. Nora D. Volkow discussing the dangers of prescription-drug abuse among teens.
• Student worksheet: Students apply factual information regarding prescription medications to respond to critical-thinking questions.

In This Installment:

Student Article

Discussion Questions: Choose from the questions below to guide discussion before and after reading “Straight Talk on Prescription Drugs.”

Before-Reading Discussion: Explain to students that the article is based on an interview conducted by a teen reporter. Discuss the following questions:
• Why is it important for teens to ask questions? How might answers to questions from another teen be helpful to you?
• What is a myth? How are myths generated and perpetuated?
• Think of sources where you might go to seek out information about drugs. Are these sources reliable or not?
• Have you heard information about prescription drugs that you think might be a myth? How would you find out if the information is true? What are some safe, reliable sources for answers?

After-Reading Discussion:
• What surprised you most about prescription-drug abuse?
• What effects of prescription drugs were unknown to you?

Writing Prompts:
• What do you think are the responsibilities of each of the following groups in combating teen prescription-drug abuse: parents, doctors, teens?
• What actions do you think teens can take to keep themselves safe from prescription-drug abuse?

Worksheet:

Before-Worksheet Discussion: When you are prescribed a drug by your doctor, what information are you given on how to take the medication? Do you always follow those guidelines exactly?

Worksheet: Have students read the Q&A, and then answer the critical-thinking questions.

After-Worksheet Activity:
• Oral Argument: Have students choose one critical-thinking question and present a persuasive oral argument on the topic.

Assignment: You may hear information about prescription drugs in the news, online, or from friends. How do you know what’s true? There’s a lot to consider, and many teens have questions. Read on for answers to some frequently asked questions from teens.

Q: What exactly is a prescription?
A: A prescription is a doctor’s written order that authorizes a pharmacist to supply a specific medication for a patient, with instructions on its use. It says who can take the medication, in what amount, and for what length of time. Used exactly according to a doctor’s instructions, prescription drugs are usually safe and effective.

Q: How does a doctor determine the prescription a person needs?
A: A doctor writes a prescription based on a patient’s medical history, symptoms, and other factors. The doctor asks questions such as, “Are you allergic to any medications?” and “Are you currently taking any other medicines?” These questions help the doctor decide which medications to prescribe and which ones not to.

Q: Doctors prescribe prescription medications, so how can they be unsafe?
A: Prescription medications are powerful drugs. Doctors and pharmacists each take several steps to keep prescription medications safe for people who need them. Doctors custom fit a prescription to a patient’s medical history, age, weight, allergies, and other factors. Pharmacists dispense medication and help patients understand instructions for taking them. Oftentimes, this includes warning labels like: “Take with food” or “Avoid prolonged sunlight” or “Federal law prohibits the transfer of this drug to any person other than the patient for whom it was prescribed.” When a friend gives you a prescription—whether it’s to cure a sore throat or to get you high—there can be serious health consequences because the medication is tailored to your friend’s needs, not yours.

CRITICAL-THINKING QUESTIONS

Answer the following questions on a separate piece of paper or discuss in a group.

1. Why is it important to tell your doctor about any medical conditions you have and all the medications you take, including prescription drugs, over-the-counter medicines, and dietary supplements?

2. What would you say to someone who asked you for pills that were prescribed only for you?

3. At a party a friend offers you alcohol and a pill. What would you do, and why?

4. Explain why the following statement is a myth: Prescription drugs come from a doctor and a pharmacy, so they must be safe.

5. Explain why the following statement is a myth: It’s OK for me to use a prescription from the medicine cabinet that was prescribed for someone else in my family.
